

Navigation: Map Scales

For the two common map scales mentioned below fill in the rest of the grid

Scale:	How many cm on the map is a KM	One advantage of this scale over the other	Another advantage of this scale
1: 50 000			
1: 25 000			

Navigation: Grid References

On the map provided find the following grid references. At that point will be a symbol for a feature, If you don't know what the symbol means look it up in the map's key. Write down the feature at that point (don't write down place names, we are looking for words like, windmill, telephone box, triangulation point, mast, railway station, etc...)

If you have not been given a map the write the grid references of each of the little x's by the letters A-G on the 'Measuring Distance' page to the right. If you don't know how to take a grid reference then Google 'using the national grid ordnance survey' or download a PDF from here:

<https://www.lupineadventure.co.uk/downloads/dofe-downloads.html#os>

Grid Reference.	Feature (or letter if using the map on the right) at the location.
